

**WE ARE VENG. A HIGH VALUE
ADDED TECHNOLOGY AND SERVICES
COMPANY THAT SPECIALIZES IN THE
SPACE INDUSTRY.**

We are a company committed to high technology that focuses on space activity and the technology industry in general. We provide high added value in both hardware and software for our customers, getting involved from the design, conceptual and detail engineering, including manufacturing, assembly, integration and testing of our products. Among our products we can highlight the development of systems, subsystems and special parts for satellites.

Electronic Integration & Testing Facility

Antenna Design and Testing Facility

Thermal Vacuum Testing Facility

Electromagnetic Compatibility Facility

Precision Metrology Facility

Special Coatings

Radiofrequency Testing Facility

Engineering Services

Aeronautical Mechanical Engineering

Electronics Engineering

Special Manufacturing Services

Surface-Mount Technology (SMT)

Friction Stir Welding Center (FSWC)

Special Machining

Development of Additive Manufacturing Products

Special Heat Treatments

Harness

Carbon Fiber Tanks (COPV)

Container designed to store gas, such as CNG and H₂. These containers are manufactured from a polymeric liner (with metallic connection ports) on which carbon fiber is wound in a sequence designed to withstand the internal pressure that the gas to be contained will exert.

This way of manufacturing the pressure vessel gives it a high specific resistance (resistance Vs weight) compared to a metallic container.
